

Civil Engineer/Project Manager

Our growing land development firm has an opening for an experienced Civil Engineer/Project Manager for primarily residential subdivision design and construction. The Civil Engineer/Project Manager is responsible for all aspects of a land development project from initial feasibility studies through design, construction, and customer support during the sales process.

Responsibilities of the Civil P.E./P.M.

- Evaluating project feasibility by optimizing site layouts with site-specific design considerations
- Overseeing the design of roads, water distribution systems, sanitary sewer networks, and stormwater infrastructure
- Overseeing the preparation and submittal of zoning applications, plat, plans and specifications to city governments and working to get them approved
- Overseeing the preparation of necessary permitting applications
- Overseeing the preparation of stormwater management and erosion control plans
- Overseeing the development of project budgets and schedules (including construction)
- Ensuring that projects are completed on-time and within the budget

Minimum Qualifications for Applicants

We're looking for applicants with the following minimum qualifications:

- At least five years' experience performing work with the responsibilities noted above
- B.S. degree in engineering from an accredited university
- An active P.E. license (Civil Branch) in the state of Texas (with no disciplinary action)
- Extensive experience with AutoCAD, HEC-HMS, HEC-RAS
- Ability to pass a drug and criminal background check

Applicants are encouraged to address these minimum qualifications and explain how he/she is qualified in a cover letter.

How to Apply

If you meet our minimum qualifications, and you're looking for an opportunity with great career progression potential, please forward a cover letter with your resume to inquiries@yalgoengineering.com.
